GrievanceHub

Digital Grievance Redressal System

Business Requirement Document (BRD)

Problem Statement, Objectives & High-Level Features

Prepared by: **Shantanu Shrivastava**

Date: April 2026

MP Online Internship Project

1. Introduction

1.1 Purpose

This BRD defines the business requirements for GrievanceHub, a Digital Grievance Redressal System for MP Online. It serves as the primary reference for understanding the problem being solved, project objectives, and high-level feature requirements.

1.2 Scope

GrievanceHub is a web-based portal that allows citizens of Madhya Pradesh to submit, track, and manage complaints against public service departments. It provides a separate admin interface for government officials to review, categorize, and resolve grievances.

1.3 Stakeholders

Stakeholder	Role	Interaction
Citizens	End Users	Submit grievances, track ticket status
Admin / Officials	System Administrators	Review, update, and resolve grievances
MP Online	Project Owner	System deployment and oversight
Developer (Shantanu)	Technical Team	Build, test and maintain the system

2. Problem Statement

Currently, citizens face significant challenges in registering complaints against public service failures:

- No centralized platform for submitting complaints
- No way to track complaint status after submission
- Anonymous complaints are not accepted, discouraging many citizens
- No accountability mechanism for government departments
- Manual processes lead to delays and loss of complaints

GrievanceHub addresses all of these problems by providing a digital, transparent, and accessible platform for grievance redressal.

3. Project Objectives

- Provide an online portal for citizens to submit grievances anytime, anywhere
- Support both anonymous and registered (logged-in) grievance submissions
- Auto-generate a unique ticket ID for every complaint for easy tracking
- Enable citizens to check real-time status of their complaint using ticket ID
- Provide an admin dashboard for officials to manage and resolve grievances
- Implement role-based access control (Citizen vs Admin)
- Ensure secure authentication using JWT tokens

4. High-Level Feature Requirements

Req ID	Feature Name	Description	Priority
F-01	User Registration	Citizens can create an account with name, email, phone and password	High
F-02	User Login / Logout	JWT-based secure login with token management	High

Req ID	Feature Name	Description	Priority
F-03	Anonymous Submission	Any citizen can submit complaint without creating account	High
F-04	Logged-in Submission	Registered users can submit grievances linked to their account	High
F-05	Ticket ID Generation	System auto-generates unique ticket ID (e.g. GH-20250101-ABC123)	High
F-06	Ticket Status Tracking	Citizens track complaint status using ticket ID	High
F-07	Citizen Dashboard	Logged-in users view all their submitted grievances	Medium
F-08	Admin Dashboard	Admin views all grievances with stats and filters	High
F-09	Status Management	Admin updates grievance status (Open / In Progress / Resolved / Closed)	High
F-10	Admin Remarks	Admin can add resolution notes to any grievance	Medium

5. Non-Functional Requirements

Category	Requirement
Security	Passwords hashed using bcrypt; API secured with JWT bearer tokens
Usability	Responsive UI using Tailwind CSS; works on mobile and desktop
Performance	API response time under 500ms for all standard operations
Scalability	MySQL database with SQLAlchemy ORM allows easy schema evolution
Availability	Backend served via Uvicorn ASGI server, suitable for 24x7 operation
